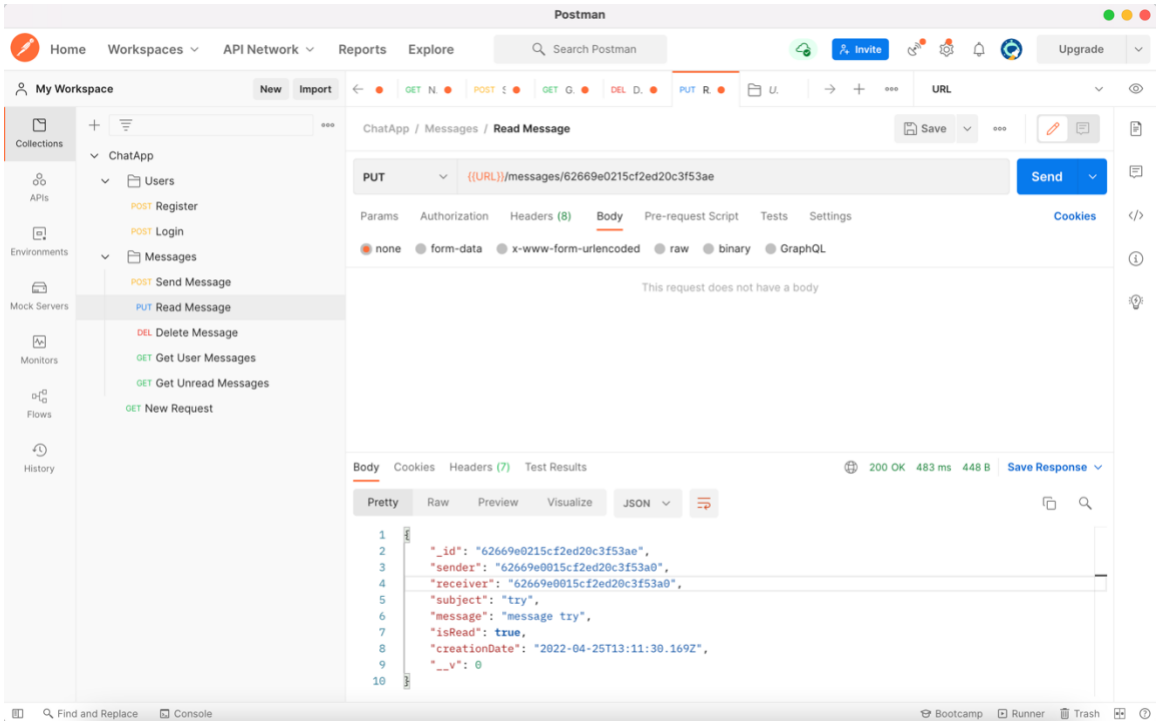
Postman requirements file

The app runs on: https://abrachatapp.herokuapp.com/

To initial dummy data to the db, please go “db.js” file which located in “AbraChatApp/server/config”,
go to line 12 and remove the “//“ marks before initUsers() then save.
Make sure to mark it as a comment again to avoid duplicate data in the next saves.

Import the data pack attached (named PostmanData)



1. Create a user: Users -> Register then change the name & password then click send.

2. Login to user: Users -> Login then change the name & password then click send.

3. Get All users: New Request -> GET http://localhost:10001/users

4. Get All messages: New Request -> GET http://localhost:10001/messages

5. Send Message: Messages -> Send Message -> POST
   http://localhost:10001/messages/SENDER-USERID
   // (make sure you put the sender user id)

6. Get All messages of specific user: Messages -> Get User Messages -> GET
   http://localhost:10001/messages/USERID
   // (replace with specific user ID)

7. Read Message: Messages -> Read Message -> PUT
   http://localhost:10001/messages/MESSAGEID
   // (replace with message id)

8. Get All Unread messages of specific user: Messages -> Get Unread Messages -> GET http://localhost:10001/messages/USERID
   // (replace with …)

9. Delete Message: Messages -> Delete Message -> DELETE
   http://localhost:10001/messages/MESSAGEID
   // (replace with message id)
